## NightCon 2011 Presents Night Vision Achievement Award to Dick Borkowski

A special event such as NightCon 2011 would not be complete without recognition of those key individuals that serve the civil night vision industry, and help define the industry we enjoy today. The Night Vision Achievement Award is presented to an individual that has significantly supported the development of the civilian night vision industry. The contributions of the recipient will have benefited the industry by providing solutions that have lead or significantly supported regulatory approval and acceptance of night vision within civil aviation.

The producers of NightCon 2011 recognized Mr. Dick Borkowski, CEO of REB Technologies (REBTECH) with the first annual Night Vision Achievement Award. With more than 40 years supporting night vision in both the military and civil segments, Mr. Borkowski exemplifies all this award represents. To present this award, Scott Baxter of Bell Helicopter spoke of Mr. Borkowski's support as a key component in the development and eventual approval of the first FAA Approved Part 141 NVG pilot training course at the Bell Helicopter Training Academy.
